Part 9: Frequently Asked Questions & Support **Reference**

Part 1: Downloading & Installing the APK

Visual procedure for installing SpotCheck on Android devices without Google Play Store dependencies.

Step 1.1 Download Completion & Open Prompt

Screenshot 1: Download File

Once you download `spotcheck-debug.apk` (approx 20 MB) to your Android device, the system notification drawer indicates completion:

- Tap **"Open file"** to launch the installation wizard.
- If prompted with *"Install unknown apps"*, grant permission to Chrome or your File Manager in Android Settings.

Android Security Sandbox Notice

Android issues a standard prompt for any direct APK. SpotCheck runs in a sandboxed runtime and requests zero sensitive SMS or contact permissions.

Step 1.2 Confirm Package Installation

Screenshot 2: Package Installer

The Android Package Installer asks: *"Do you want to install this app?"*.

- Confirm the app name displays as **SpotCheck**.
- Tap **"Install"** in the bottom right corner to unpack the application binary.

Step 1.3 & 1.4

Google Play Protect Verification

Google Play Protect analyzes the APK package signature:

- Select **"Scan app"** (or *Install without scanning*).
- Play Protect verifies the app's cryptographic signature and confirms clean status.
- Tap the green **"Install"** button. The SpotCheck icon will appear in your application launcher.

Fast Launch

Upon install completion, tap **"Open"** to launch straight into onboarding.

Part 2: Account Creation & 4-Step Onboarding

SpotCheck uses high-precision location and verified email credentials to ensure genuine local presence.

Welcome

Sign In & Account Portal

Screenshot 5: Welcome Screen

On first launch, SpotCheck welcomes you with a streamlined sign-in portal:

- **Existing Users:** Enter registered Email Address and Password, then tap **"Sign In"**.
- **New Users:** Tap the **"Create Account"** link at the bottom to begin the 4-step registration flow.

Step 1 of 4

Personal Identification Details

Screenshot 6: Personal Details

Provide your identity details for the community:

- **Full Name:** Enter your real name (e.g. *Narain Karthik J*). This name represents your reputation on verified answers.
- **Phone Number:** Enter your 10-digit mobile number.
- Tap **"Continue"** to advance to email verification.

Step 2 of 4 Email Verification via OTP

To eliminate bots and spam accounts, email addresses are verified with a 6-digit OTP:

1. Input your active Email Address.
2. Tap "**Send Verification Code**".
3. Check your inbox and enter the 6-digit PIN in the **OTP Code** box.
4. Tap "**Continue**".

Step 3 of 4 GPS Permission & Real-Time Geocoding

Screenshot 8: GPS Permission

Screenshot 9: Detected Locality

SpotCheck relies on true physical presence to deliver hyper-local travel intelligence:

- Choose "**Precise**" location and tap "**While using the app**".
- The reverse geocoding engine identifies your exact town/locality (e.g. *Semmipalayam*).
- If you recently moved, tap "**Detect GPS**" to refresh hardware satellite coordinates.
- Tap "**Continue**".

Step 4 of 4

Password Security Enforcement

Screenshot 10: Step 4 Password

Safeguard your account and accumulated reward points with an enforced password policy:

- At least 5 characters in length
- At least one uppercase character (A-Z)
- At least one numeric digit (0-9)
- At least one special character (!@#\$%^&*)

All 4 rules must display green checkmarks. Tap **"Register"** to enter the live platform!

Part 3: Exploring the Live Map & Spot Sheet

Interactive mapping, real-time weather telemetry, and high-reliability offline navigation caching.

Feature 3.1

Interactive Map & Weather Telemetry

Screenshot 11: Main Map
Dashboard

Your primary command center upon entering SpotCheck:

- **Blue Pulsing Dot:** High-precision satellite GPS location.
- **Destination Search:** Type any town, landmark, or route to pre-inspect conditions before driving.
- **Live Weather Bar:** Instant meteorological data (e.g. *Mainly Clear* ☀️ 33.1°C) fetched for your active coordinates.
- **Bottom Navigation:** Switch seamlessly between Map, Feed, Natives Leaderboard, and Profile.

Feature 3.2 Spot Action Sheet & Offline Area Cache

Tap anywhere on the map or tap the location bar to open the expanded Action Sheet:

- **Hardware Fix Readout:** Shows real-time precision (e.g. **±9m**).
- **Google Maps:** Handoff to external navigation apps for turn-by-turn driving directions.
- **Save Area Offline (15 km, ~15 MB):** Pre-downloads vector tiles and road topologies into internal storage so you never lose your map in mountain ghats without cell reception.
- **Actions:** Quick triggers for **"Ask Locals"** and **"Post Status"**.

Part 4: Asking Nearby Locals (Hyper-Local Q&A)

Broadcast questions to verified residents living within a 25 km radius of your selected waypoint.

Screenshot 13: Ask Locals Nearby

When algorithmic mapping tools can't tell you if a road is flooded or a spot is crowded, ask locals:

1. Tap " **Ask Locals**" on the Spot Sheet.
2. Verify your pinned location.
3. **Select Category:**
 -  **Weather:** Heavy rains, morning mist, landslide alerts.
 -  **Road:** Construction diversions, roadblocks, traffic bottlenecks.
 -  **Safety:** Night safety, police check-posts.
 -  **Spot:** Local food stalls, scenic viewpoints, parking status.
 -  **General:** Temple timings, ticket lines, ATM availability.
4. Type your question clearly and tap "► **Ask Locals**".

Intelligent Geofence Dispatch

SpotCheck alerts all verified natives and active travelers within 25 km of your target waypoint. Responses typically arrive within minutes.

Part 5: Posting Live Native Pulse Updates

Anti-fraud photographic updates with hardware camera enforcement and satellite telemetry verification.

Screenshot 14: Post Live Update

Help fellow travelers by sharing verified road and crowd conditions:

1. Tap "**+ Post Status**" from the map.
2. Confirm your current location and select an update tag (Weather, Road, Crowd, Safety, Spot).
3. Write a brief condition note (e.g. *"Waterlogging cleared at bypass junction. Normal speed resumed."*).
4. **Take Live Camera Photo:**
 - Tap "**Take Live Photo**" to activate the hardware camera.
 - Snap the ground condition proof.
5. Tap "**► Post Update**" to publish. Your update is instantly visible to all users in the corridor.

Zero-Tolerance Anti-Fraud Policy

Gallery uploads are strictly disabled in SpotCheck. Photos must be captured live through the camera lens with satellite telemetry matching your current location to eliminate fake internet reposts.

Part 6: Browsing Feeds & Community Intelligence

Monitor live traveler questions and browse verified ground reports along your travel corridor.

Tap the **"Feed"** icon in the bottom navigation bar to open the dual-stream community board:

- **Local Q&A Tab (Left):**
 - Review questions asked by nearby travelers.
 - Locals can tap to reply and earn +5 reward points for verified answers.
- **Native Pulse Feed (Right):**
 - Real-time chronological stream of live condition reports and verified camera photos.
 - Upvote helpful posts or flag outdated hazards.

Part 7: Local Experts & Gamification Leaderboard

Transparent reward points and tier badges celebrating reliable community contributors.

Tap the **"Natives"** tab to inspect top regional contributors:

Action	Points	Effect
Verified Answer Provided	+5 pts	Fast-track rank boost
Live Pulse Camera Post	+3 pts	Community credit reward
Misleading / Flagged Post	-3 pts	Reputation penalty

Contributor Tier Progression

BRONZE (0-100 PTS)

SILVER (101-500 PTS)

GOLD (501-1,499 PTS)

LOCAL EXPERT (1,500+ PTS)

Part 8: Profile Management & Server Settings

Manage account identity, inspect your credit balance ledger, and switch backend endpoints.

Screenshot 18: Profile Screen

Tap the **"Profile"** tab on the navigation bar:

1. **Native Profile Card:** Displays avatar, full name, registered email address, and active community tier.
2. **Points Balance:** Live tally of total credits earned from answers and pulse updates.
3. **FastAPI Server URL:**
 - Easily switch between development tunnels (e.g. `https://your-ngrok.ngrok-free.app`) and production cloud endpoints.
 - Tap **"Update URL"** to apply changes without reinstalling the app.
4. **Credit History:** Detailed audit ledger tracking timestamps and reasons for every point transaction.
5. **Sign Out:** Safely terminates your session and clears local cached credentials.

Part 9: Frequently Asked Questions & Support

Solutions to common operational inquiries.

Why does SpotCheck require "Precise" location permission?

SpotCheck operates on a strict 25 km hyper-local geofencing protocol. Precise GPS coordinates ensure questions and roadblock notifications are dispatched only to users physically present in that corridor.

Why can't I choose an image from my phone gallery?

To maintain 100% authentic, tamper-free ground intelligence, SpotCheck strictly disables gallery uploads. All photo evidence must be captured directly through your phone's camera in real-time.

How does the 15 km offline cache feature work?

When you tap "Save Area Offline" in the Spot Action Sheet, the app downloads road geometries and vector map tiles within a 15 km perimeter (~15 MB). This ensures smooth navigation even if you lose signal in mountain ghats.

How do I become a Verified Local Native?

Contribute regularly by answering traveler questions with accurate local details and posting live status reports. Platform administrators can also verify reputable community members through the SpotCheck Web Admin Portal.
